BRAND RESOURCE GUIDE / VERSION 3.0

The Aussie Pom

Software, systems and curiosity in action.

A personal publication by Ben Dennis. The new name carries through the suite; the approved portrait and existing visual language stay consistent.

ONE PORTRAIT, BOTH THEMES

The face remains black on lilac. The lettering changes from dark ink to warm white. Header logos omit the supporting line; banners and sharing cards include it.

BRAND RESOURCE GUIDE / VERSION 3.0

Choose the right layout

Primary

The default portrait lockup. The smaller “The” gives the shorter name room to breathe. Start around 360 px wide.

Horizontal

A single-line name with the portrait. Use for wider placements, starting around 400 CSS px.

Website masthead

514 x 104 canvas. Display at 272 x 55 CSS px in the existing header. Keep the eyes; do not squeeze the supporting line into this logo.

Compact header and wordmark

Compact: 160 x 51 CSS px. Use the name-only wordmark where the portrait already appears nearby. Preserve proportions and clear space.

The portrait at every size

Main portrait

Thin glasses, subtle eyes, rounded connected goatee and a balanced smile. Used in logos, headers, avatars, banners and link previews.

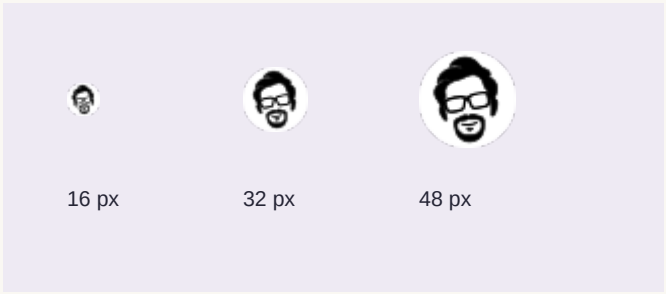

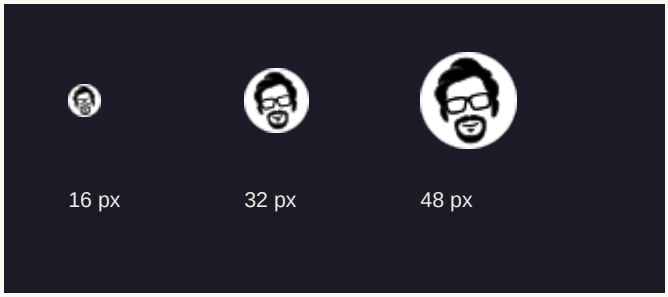

Eyeless micro portrait

The same drawing, with only the two eyes omitted. The approved browser icon has a small optical weight adjustment for tiny sizes.

Browser favicon

Black face on a solid white circle. Everything outside the circle is transparent, so the icon remains visible on light and dark browser surfaces.

Use START-HERE.html at 100% browser zoom for actual screen sizes. The ICO contains 16, 32 and 48 px frames; PNGs also include 64 and 96 px.

Separate home-screen artwork

Apple touch and maskable assets are opaque white squares for platform cropping. They are not the circular browser favicon.

BRAND RESOURCE GUIDE / VERSION 3.0

Sharing and profile artwork

Default link previews / 1200 x 630

Choose one homepage default. Keep article titles and article-specific images in the site's sharing pipeline. These static images also provide a fallback.

Website banner / 1600 x 400

LinkedIn background / 1584 x 396

Text sits away from the profile-photo overlap area. Check the crop on desktop and mobile. Generic 1500 x 500 social covers are also supplied.

Keep the portrait positive

Portrait ink is black (#000000). Main backing is lilac; browser-icon backing is white (#FFFFFF). White and purple name-only wordmarks are supplied. Face inversion is not part of the identity.

Type and clear space

Website UI and headings remain Arial/Helvetica; reading text remains Georgia. Logo lettering uses outlined Liberation Sans Bold. Allow clear space of about a quarter of the portrait-circle diameter, and preserve the aspect ratio.

Reproduction

Use flat fills. The monochrome logo has black lettering and portrait with a white circle. SVG and PDF lettering is outlined. All files use RGB; proof colour-critical print work with your printer.

BRAND RESOURCE GUIDE / VERSION 3.0

Ready for implementation

logos/	Primary, horizontal, masthead, compact and name-only wordmarks. SVG, transparent PNG and vector PDF.
icons/ and favicons/	Main and micro portraits, circular browser icons, ICO, touch and manifest assets.
social/ and banners/	1024 px avatars, two cover formats, homepage link previews and website mastheads.
web/	Integration notes, responsive header example, metadata example and colour tokens.
source/ and reference/	Vector masters, editable-text logo, build scripts, font and licence; approved portrait reference.

Use the supplied artwork

Deploy the outlined production assets. Set the exact supporting line as real homepage text. Read web/INTEGRATION.md before applying the snippets, and update references before removing old assets.

Check in the application

Verify both themes, responsive header spacing, favicon caching, accessibility and homepage/article sharing. This is an asset handoff; the repository, website and profiles have not been modified.
