BRAND RESOURCE GUIDE / VERSION 2.0

The portrait, resolved

A rounded goatee, thinner glasses, subtle eyes and a quieter smile. This is the approved drawing used throughout the updated suite.

THE FACE STAYS BLACK

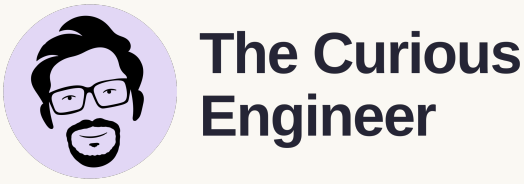

Main logos keep the same black portrait on lilac in both themes. Only the lettering changes colour. The white inverted face is retired. The browser favicon uses the same portrait without eyes, on a white circle.

BRAND RESOURCE GUIDE / VERSION 2.0

Choose the right layout

Primary

The default two-line name with the portrait on lilac. Start around 360 px wide for comfortable facial detail.

Horizontal

One-line name with a larger portrait-to-type ratio. Use for wide placements; start around 500 px wide.

Website masthead

The header retains the eyes. Start at 280-320 CSS px wide in the existing 80 px header. The canvas is 644 x 104; the image is about 52 px high at 320 px wide.

Compact and wordmark

The compact two-line arrangement gives more room to the name. The wordmark omits the portrait for use where the face already appears nearby. All production lettering is outlined.

A simpler face at tiny sizes

Main portrait

Subtle eyes, thin glasses and the approved smile. Used in primary logos, headers, avatars, banners and link previews.

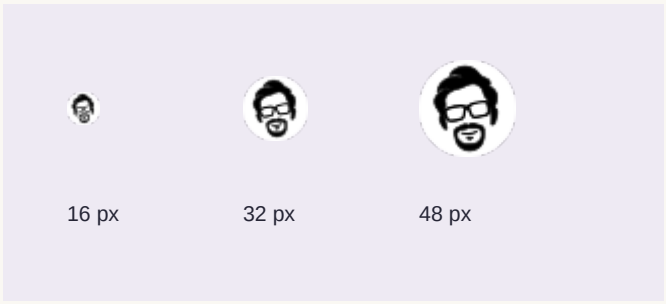

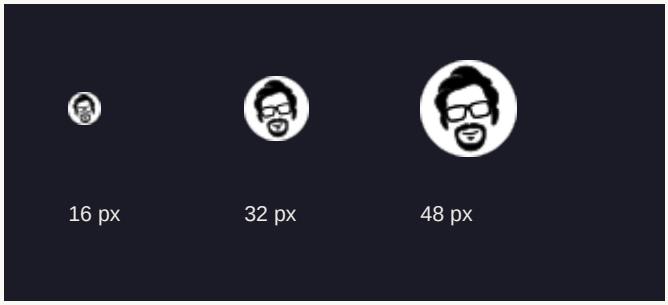

Eyeless micro portrait

The same vector drawing with the two eye paths omitted. The beard, glasses and mouth geometry stay consistent with the main portrait.

Browser favicon

Black on a solid white circle, transparent outside it. A small stroke-weight adjustment keeps the frames and mouth visible when rendered very small.

Open START-HERE.html at 100% zoom for a screen-size preview. The ICO contains 16, 32 and 48 px frames; PNGs also include 64 and 96 px.

Home-screen files are separate

Apple touch and maskable icons use opaque white squares for platform cropping. They also omit the eyes. Do not substitute these square files for the circular browser favicon.

Keep the portrait positive

The face is always black (#000000). Main identity backing is lilac; favicon backing is white. White and purple name-only wordmarks are included, but there are no white or purple face variants.

Type and spacing

Website UI and headings remain Arial/Helvetica; reading text remains Georgia. The logo uses outlined Liberation Sans Bold. Allow clear space of roughly a quarter of the portrait circle diameter and keep the original proportions.

Practical use

Use flat fills. Avoid image inversion, glow, shadows and extra symbols. The black logo variant uses black artwork and lettering on a white circle for monochrome reproduction. The outlined SVG/PDF files need no installed font.

BRAND RESOURCE GUIDE / VERSION 2.0

Use the new pack consistently

Logos
logos/

Primary, horizontal, masthead, compact and name-only wordmarks. SVG, PNG and vector PDF.

Portraits
icons/

Main face with eyes; micro face without eyes. Transparent artwork and backed versions.

Favicons
favicons/

Circular browser icons, ICO, touch and manifest assets.

Social and banners
social/ and banners/

1024 px avatars; 1500 x 500 covers; 1200 x 630 link previews; 1600 x 400 mastheads.

Implementation
web/

Theme examples, suggested public paths and existing colour tokens.

Editable originals
source/

Named vector paths, live-text primary logo, font and licence.

Replace the earlier package

Version 2.0 supersedes the original pack. Replace the old brand asset folder rather than leaving obsolete pointed-beard or inverted-face files alongside the new ones. Use the approved reference only as a visual reference.

Handoff status

The artwork and guide have been visually checked. File dimensions, vector structure, transparency and ZIP integrity are validated. The website and repository have not been modified.
